I have a PhD in Technology Management and I am currently working as an Instructor for a Major Government Contractor to provide advanced training to U.S. Forces and foreign U.S. allied forces. This rule change would allow for both current and new technologies to be developed to enable people to better communicate with persons supporting international and global training applications. I think this rule is detrimental in leveraging our technologies to better communicate with our international allies. So many things in international business are lost in translations and in some cases this puts a strain on U.S. and allied forces relationships. The use of auditory communications devices that use the 72 ? 76 MHz bands to facilitate near real time translations is imperative in today?s global market place.
